Dear Hiring Manager,

I am a final-year Computer Science and Engineering student at Vellore Institute of Technology (CGPA 9.39) with hands-on experience building AI/ML systems and production-style full-stack applications. I enjoy taking an ambiguous problem, breaking it into measurable parts, and shipping a working solution. I bring a solid grounding in machine learning and core computer science, the ability to take an idea from prototype to deployment, and a collaborative mindset that helps teams move faster, and I am applying to bring that approach to your team.

My strongest project is **RecruitIQ**, an AI resume screening system. I designed a three-stage inference funnel: rule-based filtering, a LightGBM LambdaMART ranker over 50+ semantic and structural features, and LLM-based reasoning for explainability. To keep it fast, I used FAISS vector indexing and persistent caching over Sentence-Transformer embeddings. I then deployed it on Streamlit Cloud with a recruiter dashboard of nine modules, including skill-gap analysis and candidate comparison. The project taught me how to balance model quality, latency, and usability in a single pipeline.

I like working across the stack. In **ArcHive**, a collaborative platform for architecture case studies, I built a React and Vite front end with Firebase OAuth and Supabase row-level security, enforcing per-user data isolation and transactional account deletion. In **EcoMind**, a Flutter waste-classification app, I fine-tuned a MobileNetV2 model to 92.4% accuracy across 13 categories and ran it on-device at 145 ms latency. The project reached the final round of the Yantra Central Hackathon, where I worked with a multidisciplinary team.

As a Flutter intern at Tri-Force Consulting Services, I localized the MLeads app across 20 languages (1,800+ phrases), built dynamic language selection, and worked with Firebase Authentication, Git pull requests, and code reviews. Outside coursework, I served on the core committee of VIT's Centre for Social Entrepreneurship and Development, organizing workshops and tech events for 200+ students. These experiences taught me to communicate clearly, take feedback, and deliver in a team.

I would welcome the chance to discuss how my technical foundation, curiosity, and ownership of my work can contribute to your team. Thank you for your time and consideration.

Sincerely,

Anshul Patel
